## LETROZOLE

### Name of your medication

Generic name — letrozole (LEH-truh-zole)  
Brand name — Femara® (FEH-muh-ruh)

### Common uses

Letrozole is used in the treatment of certain types of hormone-dependent breast cancer in postmenopausal women.  
Letrozole may also be used for other treatments.

### Dose and schedule

---

---

---

Taking letrozole as instructed is important to allow your treatment to be as effective as possible, so here are some key points to remember.

- ❑ Your dose may vary, but the usual dose of letrozole is 2.5 milligrams (2.5 mg) to be taken by mouth at a scheduled time once a day.
- ❑ Letrozole can be taken with or without food but at the same time each day.
- ❑ Letrozole should be taken whole and not crushed, cut, or dissolved. If you are unable to swallow letrozole, talk to your care provider or pharmacist for possible options.
- ❑ If you miss a dose of letrozole, **do not** take an extra dose or two doses at one time. Simply take your next dose at the regularly scheduled time. Be sure to write down if you miss a dose and let your care provider know about any missed doses.

### Drug and food interactions

- ❑ Letrozole has many drug interactions. Inform your care providers of all prescription medications, over-the-counter medications, vitamins, and herbal products.
- ❑ Talk with your care provider or pharmacist before taking new medications or supplements, or receiving any vaccines.

## LETROZOLE

### Storage and handling

Handle letrozole with care. Just like when chemotherapy is given into the vein, this drug can be toxic, and exposure of the drug to others should be limited.

- Store letrozole at room temperature (68°F–77°F) in a dry location away from light.
- Keep letrozole out of reach of children and pets.
- Leave letrozole in the provided packaging until it is ready to be taken.
- Whenever possible, give letrozole to yourself and follow the steps below. If a family member, friend, or caregiver needs to give letrozole to you, they also need to follow these steps:
  1. Wash hands with soap and water.
  2. Put on gloves to avoid touching the medication. (Gloves are not necessary if you give the drug to yourself.)
  3. Gently transfer the letrozole from its package to a small medicine or other disposable cup.
  4. Administer the medicine immediately by mouth with water.
  5. Remove gloves and do not use them for anything else.
  6. Throw gloves and medicine cup in household trash.
  7. Wash hands with soap and water.
- If a daily pill box or pill reminder will be used, contact your care team before using:
  - The person filling the box or reminder should wear gloves (gloves are not necessary if you are filling the box or reminder).
  - When empty, the box or reminder should be washed with soap and water before refilling. Be sure to wash hands with soap and water after the task is complete, whether or not gloves are worn
- If you have any unused letrozole, **do not** throw it in the trash and **do not** flush it down the sink or toilet. Talk to your care provider or pharmacist about proper disposal of letrozole.
- If you are traveling, put your letrozole's packaging in a sealed plastic bag. Ask your pharmacist if any additional travel precautions are needed.

## LETROZOLE

### Serious side effects of letrozole

- Letrozole may increase your risk for osteoporosis which is a medical problem where your bones are more fragile and more likely to break. Your care team may prescribe a medication to help prevent broken bones.
- You may feel more tired or dizzy while taking letrozole. Use caution when driving or operating machinery.

If you experience ANY uncontrolled side effect, call your physician or healthcare center immediately:

### Handling body fluids and waste

Letrozole remains in your body for several days after it is taken, so some of the drug may be present in urine, stool, sweat, or vomit. Once you have started to take letrozole, it is important to follow the instructions below every day for as long as your treatment lasts. This is to keep yourself, loved ones, and the environment as safe as possible.

- Pregnant women should avoid touching anything that may be soiled with body fluids from the patient.
- Toilet and septic systems
  - You may use the same toilet, septic tank, and/or sewer that you usually use. If you have a low-flow toilet, close the lid and flush twice to ensure all waste has been discarded.
  - If the toilet or toilet seat becomes soiled with urine, stool, or vomit, clean the surfaces before other people use the toilet.
  - Wash hands with soap and water after using the toilet.
- If you need a bedpan, be sure your caregiver knows to wear gloves to assist with cleanup and to wash the bedpan with soap and water every day.
- If you do not have good control of bladder or bowels, use a disposable pad with a plastic back, a diaper, or a sheet to absorb body waste.
- Wash any skin that has been exposed to body waste or letrozole with soap and water.
- Linens or clothing that are soiled with body fluids or body waste should be washed separately from other linens and clothing. If you do not have a washer, place the soiled linens in a plastic bag until they can be washed.
- Wash hands with soap and water after touching linens or clothing that may be soiled with body fluids.

### Pregnancy, sexual activity, and contraception

- Women should not become pregnant and men should not get a partner pregnant while taking letrozole. Men and women of childbearing age and potential should use effective contraception during therapy and for a minimum of 3 weeks after the last dose of letrozole.
- Effective contraception could include one or more of the following: oral contraceptive, barrier methods, etc.
- Do not breastfeed while taking letrozole and for at least 3 weeks after the last dose of letrozole.
- Inform your care provider if you become pregnant.
- It is safe to hug and kiss. Special precautions may be needed for sexual activity while on letrozole, and you are encouraged to ask your care provider.
